

Pre-Terminated DC Disconnectors

YOUR #1 CHOICE FOR BoS SOLUTIONS

Sibert has a wide range of BoS products available for the PV Installation market and has recently combined our in-house technical engineering capabilities with the excellent range of true DC disconnectors we provide from IMO Precision Controls.

The result being a new service we offer to pre-wire and terminate these DC disconnectors with our MC4-compatible panel-mount connectors. These connectors are TUV approved and contain an O-ring seal between the connector body and isolator entry hole.

By providing you, the installer, with these pre-terminated products, we can help you to reduce your on-site installation time and effort.

Other custom configurations are available upon request, please contact us to discuss your requirements further.
