

## Custom AC Component Enclosures

### YOUR #1 CHOICE FOR BoS SOLUTIONS

Sibert has a wide range of BoS products available for the PV Installation market and is now able to provide custom designed and assembled enclosures to help reduce time spent on-site during installation/commissioning etc.

Consisting of a combination of Generation Meter (L&G 5235, Elster A100C or Inepro PRO1D, for example), RCD and/or MCB, Live/Neutral terminals and door-mounted AC Isolator, these units provide a simple interconnect solution that not only improves on the aesthetics and safety aspects of the AC BoS components needed, but also helps to minimise the installation time spent individually wiring/connecting these various components together on-site.

Sibert's in-house design and engineering capabilities enables us to provide you, the installer, with a quick turn-around on the custom-configured solution that best meets your requirements.
